

Vulnerability Management

Strengthen your resilience with proactive threat identification and response

Cyber attackers are always searching for new weaknesses to exploit. Many organisations rely on vulnerability scans alone, mistakenly believing this provides sufficient insight into their security posture. Scans alone do not offer a complete understanding of how, when and why an attack may occur. Without expert analysis, critical vulnerabilities can go undetected, leaving organisations exposed to potential attacks.

Roc's Vulnerability Management service goes beyond standard scanning. It provides a comprehensive approach to identifying, prioritising, and remediating weaknesses across your IT environment. By integrating broader vulnerability intelligence with expert analysis, we help organisations manage cyber risk effectively, reduce exposure to exploitation, and expand overall resilience.

Ideal for you if...

- ▶ You want to move beyond automated vulnerability scans for deeper security insights
- ▶ You need a structured and cost-effective approach to patching and remediation
- ▶ You require better integration of vulnerability management with corporate risk strategy
- ▶ You seek expert support to enhance your in-house security capabilities
- ▶ You are focused on reducing exposure to operating system and software vulnerabilities

Why Roc?

| | | | |
|---|------------------------|------------------------------------|---------------------------------------|
| 24/7/365 In house MSOC | 100% UK coverage | 70+ highly trained engineers | 100% engineers SC or DV cleared |
| CYBER ESSENTIALS PLUS accredited | ISO9001 accredited | 14001 accredited | 27001 accredited |

Service benefits

- ▶ Identify and prioritise vulnerabilities based on real-world risk
- ▶ Minimise exposure to cyber threats through structured remediation
- ▶ Reduce operational disruption with strategic patch management
- ▶ Strengthen corporate risk management with vulnerability insights

Service overview

Continuous vulnerability identification and prioritisation

Understanding where vulnerabilities exist is just the first step—knowing which ones pose the greatest risk is critical. Roc provides in-depth analysis of your IT estate, uncovering misconfigurations, outdated software and exploitable weaknesses. We apply risk-based prioritisation, focusing on the vulnerabilities most likely to be exploited in real-world attack scenarios. This enables you to focus your resources where they are needed most.

Strategic remediation and patch management

Patching vulnerabilities can be time-consuming and disruptive if not managed effectively. Our approach integrates cost-effective patching strategies, ensuring essential updates are applied with minimal impact on business operations. We work alongside your IT teams to implement a structured remediation plan that aligns with your organisation's risk appetite and operational needs.

Threat intelligence-driven risk management

Vulnerabilities don't exist in isolation; they are part of your organisation's wider risk landscape. Roc's service integrates with your corporate risk management framework, providing insights that feed directly into your risk register. This helps security leaders and executives make informed decisions about security investments, regulatory compliance, and overall cyber resilience.

Protection against OS and software vulnerabilities

Operating system vulnerabilities are a common target for attackers, often leading to privilege escalation and system compromise. Our vulnerability management service proactively identifies security gaps within your OS and software environments, meaning you remain protected against emerging threats. By aligning patching cycles with risk-based insights, we reduce the likelihood of security breaches caused by unpatched vulnerabilities.

Expert-led security oversight

Beyond automation, Roc's security consultants provide expert oversight, translating raw vulnerability data into actionable intelligence. Our team works closely with your internal teams, offering strategic guidance and technical support to enhance your security posture. Whether you need one-time support or ongoing vulnerability management, our flexible service model adapts to your organisation's requirements.

Service Information

At Roc, we offer two service options:

- ▶ **Test Only:** Roc undertakes a point-in-time review and provides a written report to your team
- ▶ **Test and Remediation as a Service:** As above, but Roc will then provide full remediation of all risks and vulnerabilities identified in the report

Options can be applied to computers only or extended to include computers and infrastructure
